Frameworks: Ruby On Rails, React.js, Redux, Django, Laravel, Node.js, Angular.js, Backbone.js, Wordpress, Shopify

Platforms: Heroku, Github

Databases: MySQL, PostgreSQL, MongoDB

EXPERIENCE

URI Marketplace – Montgomery, AL – **Groupon Style Marketplace for Online 3rd Party Sellers**
Lead Developer 2018-2019

- Coordinated with 3 developers the entire process of development to project launch; delivered on time and within budget specifications.
- Developed a full stack web application using Ruby on Rails, JavaScript, and PostgreSQL that allowed vendors to quickly add their existing catalog of products and users to quickly checkout.
- Focused on designing a visually appealing UI (user interface) and a simple onboarding UX(user experience) experience using latest SCSS and Flexbox standards.

URI Prep and Ship – Montgomery, AL – **Real-Time Inventory Management System**
Full-Stack Developer 2018-2019

- Developed using Ruby on Rails, React.js, and PostgreSQL to build a complete inventory management system backend to track orders and shipments in real time.
- Managed production code using Rspec and Github.
- Collaborated with a design agency to design a simple and easy to use user flow.

Klickly – Santa Monica, CA – **One Click Social Media Payment Platform**
Full-Stack Developer 2017-2018

- Developed a scalable full-stack platform using Node.js, Express, MongoDB, React.js and Redux that allowed users to pay using a one-click payment system on their favorite social platforms.
- Collaborated with the development team on how to implement asynchronous calls to back-end apis on various emerging social platforms.
- Debugged and unit tested all code written using latest testing frameworks.

EDUCATION

UNIVERSITY OF CALIFORNIA, DAVIS – Davis, CA
B.S. Organizational Studies, Communication Minor
• Balanced academic, employment (30+ hours a week).

RECENT PROJECTS

Budmates - Postmates For Medical Cannabis

Developed a Postmates like web application that allowed customers to quickly search for local medical dispensaries, look through their products, and have it delivered within the hour. Built using Ruby on Rails, MySQL, and vanilla JS.

LoveVapory - Wholesale Ecommerce Platform

Built a custom marketplace that integrated into a custom backend order fulfillment system to allow the business owner to quickly add products and allow customers to search, filter and purchase products quickly. Built using Node.js, React.js, Redux, MongoDB.

AirPrep - AirBnB for Order Fulfillment Centers

Developed a AirBnB style booking platform that allowed users to quickly search for local fulfillment centers and send in shipments to their fulfillment center of choice. Built using Ruby on Rails.

MarketplaceFreelancers - Fiverr Style Marketplace for Online Sellers

Built a Fiverr style marketplace that allowed users to quickly find gigs to help them sell on their favorite online marketplaces (Amazon, Walmart, Target, etc.). Built using Ruby on Rails 6, PostgreSQL.
